vengine

1.1 VEngine - Vulkan Graphics Engine

WORK IN PROGRESS!

Welcome to **VEngine**, a Vulkan-based graphics engine.

This project is designed to provide a high-performance and flexible foundation for building 3D applications and games, taking full advantage of the Vulkan API.

1.1.1 Features

- **Vulkan Rendering Pipeline:** Leveraging Vulkan for high-performance graphics rendering
- **Basic Camera System:** Control camera movement in the 3D space
- **Input System:** Keyboard-based controls for movement and looking around
- **Model Loading:** Import 3D models using TinyObjLoader
- **Real-time debugging:** Toggle debug windows using key bindings
- **Doxygen Documentation:** Automatically generated documentation hosted on GitHub Pages

1.1.1.1 Planned Features:

- **Cross-platform support** (Linux, macOS, Windows)
- Improve shadow
- Model Importing (using Assimp)
- Physics Integration
- Support for more input devices (e.g., mouse, game controller)
- Audio Integration

1.1.2 Prerequisites

Make sure you have the following dependencies installed on your system:

- [CMake 3.27](#)
- [C++20](#)
- [Vulkan](#)
- [GLM](#)
- [assimp](#) (unused ATM)

1.1.3 Usage

1.1.3.1 Build

```
$> ./build.sh build  
[...]
```

This script also handle several other commands: `clean`, `format` and `doc`.

1.1.3.2 Run

```
$> ./vengine  
[...]
```

1.1.4 Key Bindings

The following keyboard controls are currently available for interacting with the engine:

Key	Description
z	Move forward
S	Move backward
q	Move left
D	Move right
SHIFT	Move down
SPACE	Move up
arrow up	Look up
arrow down	Look down
arrow left	Look left
arrow right	Look right
F1	Show debug windows

1.1.5 Documentation

The documentation is generated using [Doxygen](#). You can access the latest version on the [GitHub Pages](#) [dite](#).

1.1.6 Commit Norms

Commit Type	Description
build	Changes that affect the build system or external dependencies (npm, make, etc.)
ci	Changes related to integration files and scripts or configuration (Travis, Ansible, BrowserStack, etc.)
feat	Addition of a new feature
fix	Bug fix
perf	Performance improvements
refactor	Modification that neither adds a new feature nor improves performance
style	Change that does not affect functionality or semantics (indentation, formatting, adding space, renaming a variable, etc.)
docs	Writing or updating documentation
test	Addition or modification of tests

1.1.7 License

This project is licensed under the MIT License - see the [LICENSE](#) file for details.

1.1.8 Acknowledgements

Special thanks to [Brendan Galea](#) for inspiration and resources related to Vulkan development.

6.1.3.18 unmap()

```
void ven::Buffer::unmap ()
```

Unmap a mapped memory range.

Note

Does not return a result as vkUnmapMemory can't fail

Definition at line 32 of file [buffer.cpp](#).

6.1.3.19 writeToBuffer()

```
void ven::Buffer::writeToBuffer (
    const void * data,
    VkDeviceSize size = VK_WHOLE_SIZE,
    VkDeviceSize offset = 0) const
```

Copies the specified data to the mapped buffer.

Default value writes whole buffer range

Parameters

<i>data</i>	Pointer to the data to copy
<i>size</i>	(Optional) Size of the data to copy. Pass VK_WHOLE_SIZE to flush the complete buffer range.
<i>offset</i>	(Optional) Byte offset from beginning of mapped region

```

Copies "instanceSize" bytes of data to the mapped buffer at an offset of index * alignmentSize.

Parameters

<i>data</i>	Pointer to the data to copy
<i>index</i>	Used in offset calculation
